Spray & Clean will remove the mold stains within the decking without scrubbing

How to Clean

Composite Decking

Before

After

Maintaining a Clean Deck:

If this is the first time you have cleaned your deck it's possible that there are deep set mold stains that the solution didn't reach, they may rise to the surface at some point and need cleaning again, this may happen once or twice after the initial cleaning, once that phase is over to keep your composite decking looking good, a routine cleaning is necessary, this can be very simply done by diluting 4 parts water with 1 part Spray & Clean and spraying your deck every 60 days or so during the season, spraying your deck an hour or two before an oncoming rain storm is a perfect way to rinse your deck naturally. Another way of maintaining a clean composite deck is after the cleaning is complete to apply a water sealer made specifically for composite decking.
